

wherein:

X is hydrogen or hydroxy; and R_a and R_b are hydrogen or acetyl, which process comprises:

(i) the preparation of a compound of formula (I):

wherein R_1 is C_{1-6} alkyl, or phenyl C_{1-6} alkyl in which the phenyl group is optionally substituted; and R_3 is an amino group or a protected amino group, which preparation comprises the reaction of a compound of formula (II):

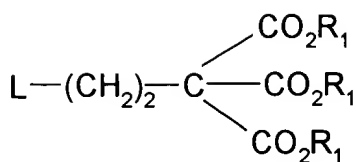

wherein R_3 is as defined above for formula (I), with a compound of formula (V):

(V)

wherein L is a leaving group and R₁ is as defined for formula (I), to give a compound of formula (VI):

(VI)

and thereafter converting the intermediate compound of formula (VI) to a compound of formula (I) via decarboxylation; and

(ii) conversion of the resulting compound of formula (I) to a compound of formula (A) by:

- removal, if necessary, of the amino protecting group;
- reducing the ester groups CO₂R₁ to CH₂OH groups, and, if necessary, acetylating to form the corresponding CH₂OAc groups; and
- dechlorinating via a hydrogenolysis reaction to yield a compound of Formula (A) in which X is hydrogen; or dechlorinating via a hydrolysis reaction to yield a compound of Formula (A) in which X is hydroxy.

11. A process according to claim 10 wherein, in the compound of formula (V), R₁ is C₁₋₆ alkyl and L is halogen.

12. A process according to claim 11, wherein L is bromo.

13. A process according to claim 10, wherein R₁ is methyl or ethyl.

Decision

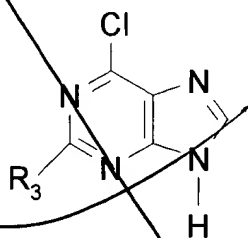

14. A process according to claim 10 wherein decarboxylation of the compound of formula (VI) is effected by the addition of about 0.42 equivalents of sodium methoxide.

15. A process for the preparation of a compound of formula (I):

(I)

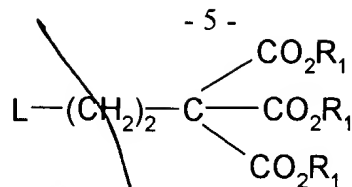

wherein R₁ is C₁₋₆ alkyl, or phenyl C₁₋₆ alkyl in which the phenyl group is optionally substituted; and R₃ is an amino group or a protected amino group, which preparation comprises the reaction of a compound of formula (II):

(II)

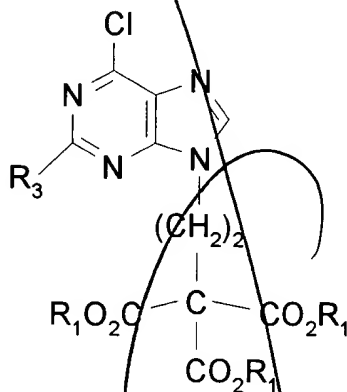

wherein R₃ is as defined for formula (I), with a compound of formula (V):

09265926-031199

(V)

wherein L is a leaving group and R₁ is as defined for formula (I), to give a compound of formula (VI):

(VI)

and thereafter converting the intermediate compound of formula (VI) to a compound of formula (I) via decarboxylation.

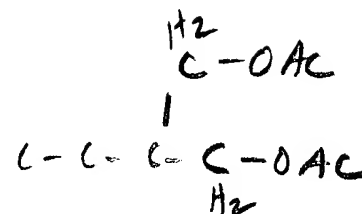

16. A process according to claim 15 wherein, in the compound of formula (V), R₁ is C₁₋₆ alkyl and L is halogen.

17. A process according to claim 16, wherein L is bromo.

18. A process according to claim 15, wherein R₁ is methyl or ethyl.

19. A process according to claim 15 for the preparation of 9-(4-acetoxy-3-acetoxymethylbut-1-yl)-2-amino-6-chloropurine.

20. A process according to claim 15 wherein decarboxylation of the compound of formula (VI) is effected by the addition of about 0.42 equivalents of sodium methoxide.
